As a full-stack web developer with limited experience, I bring a strong grasp of front-end and back-end technologies along with a desire for lifelong learning and problem-solving. I have worked on a few projects both independently and as part of a team. I have developed independent personal projects too. I'm eager to collaborate with a creative team, crafting user-friendly and responsive online applications, while enhancing my web development skills.

## WORK EXPERIENCE

**Safeer**  
Front-End Developer

(August 09, 2023 - Present)

I had the opportunity to work on a project for Safeer, a well-known real estate agency. For this project, I created a feature-rich website using a combination of Next.js and Laravel to ensure a smooth and dynamic user experience. APIs and other components were integrated into the implementation to improve functionality. I worked closely with a team of professionals to bring the website to life throughout the project, ensuring it suited the company's specific objectives and goals.

**Kodatik**  
Front-End Developer

(May 26, 2023 - August 01, 2023)

I was employed as a front-end developer by the Turkish startup Kodatik to handle the website's design and to build functionalities. I was given tasks and projects to work on, and I primarily used Next.js and laravel to complete these projects.

## EDUCATION

**Ostim Technical University**  
computer engineering

<https://www.ostimteknik.edu.tr/>

**Udemy**  
Full-Stack Web Development Bootcamp, Front-end , Back-end , Blockchain Development

<https://www.udemy.com/course/the-complete-web-development-bootcamp/learn/lecture/37350562?start=705#overview>
